

Notenra — Play Store & App Store Release Guide

Release Packaging, Artifacts & Store Submission Checklist | Version 1.0.2+3

NOTENRA — STORE SUBMISSION & DEPLOYMENT GUIDE (PLAY STORE & APP STORE)

This guide contains all necessary steps, artifacts, metadata, and instructions to publish Notenra to the **Google Play Store** and **Apple App Store**.

1. Google Play Store Submission (Android)

Ready-to-Upload Artifacts

The release-signed Android App Bundle (AAB) is generated and located at:

Play Store App Bundle (AAB): [d:\notenra\release_builds\notenra-v1.0.2-playstore.aab]
(file:///d:/notenra/release_builds/notenra-v1.0.2-playstore.aab) *(or
d:\notenra\build\app\outputs\bundle\release\app-release.aab)*

Direct Installable APK: [d:\notenra\release_builds\notenra-v1.0.2-release.apk]
(file:///d:/notenra/release_builds/notenra-v1.0.2-release.apk)

App Specifications

Package Name: com.notenra.notenra

Version Name: 1.0.2

Version Code: 3

Minimum Android SDK: 23 (Android 6.0 Marshmallow)

Target Android SDK: 34 (Android 14)

Signing Key: Signed with upload-keystore.jks (upload alias).

Play Console Upload Steps

1. Log in to the [Google Play Console](https://play.google.com/console).
2. Select your Notenra application (or click **Create App**).
3. Navigate to **Production** (or **Closed testing / Internal testing**) > **Create new release**.
4. Drag and drop notenra-v1.0.2-playstore.aab .
5. Enter Release notes:

- Ambient AI SOAP note generation with ICD-10 & CPT medical coding
- Multi-recording audio aggregation for single patient encounters
- Offline sync queue with AES-GCM encrypted audio storage
- Performance, stability, and HIPAA technical safeguard enhancements

6. Data Safety Declarations in Play Console:

- * **Audio recordings:** Collected & encrypted in transit / at rest for app functionality (Clinical transcription).
- * **Personal info (Name, Email):** Collected for account management & authentication.
- * **Data Encryption:** All data encrypted in transit (HTTPS / TLS) and at rest.
- * **Data Deletion:** Clinicians can request deletion or auto-purge local recordings.

2. Apple App Store Submission (iOS)

iOS Configuration Summary

The iOS project is configured with all required permissions and declarations in [`ios/Runner/Info.plist`] (file:///d:/notenra/ios/Runner/Info.plist):

Bundle Identifier: `com.notenra.notenra` (or your configured team bundle ID)

Version / Build: `1.0.2 / 3`

Export Compliance (`ITSAppliesNonExemptEncryption`): Set to `YES` (Uses standard exempt HTTPS & AES data protection; avoids export compliance review pauses).

Privacy Permissions Configured:

- * `NSMicrophoneUsageDescription` : `"Notenra records clinical consultations so they can be transcribed into your notes."`
- * `NSFaceIDUsageDescription` : `"Face ID unlocks the encrypted vault that protects patient health information."`
- * `UIBackgroundModes` : `audio` (allows background consultation recording).

Building the iOS Release Archive

(Apple requires macOS + Xcode to compile the final `.ipa` or Xcode Archive)

Option A: Building on a Mac with Xcode

1. Open the project in Terminal on a Mac:

```
`bash
cd notenra
flutter pub get
cd ios && pod install && cd ..
flutter build ipa --release
```

2. Open `ios/Runner.xcworkspace` in Xcode.
3. Select **Product > Archive**.
4. In the Organizer window, click **Distribute App > App Store Connect > Upload**.

Option B: Automated Build via GitHub Actions / CI

If building via GitHub Actions (`.github/workflows/ios_release.yml`), run:

```
name: Build iOS Release
on: [workflow_dispatch]
jobs:
  build:
    runs-on: macos-latest
    steps:
      - uses: actions/checkout@v4
      - uses: subosito/flutter-action@v2
        with:
          flutter-version: '3.x'
      - run: flutter pub get
      - run: flutter build ipa --release --export-options-plist=ios/ExportOptions.plist
```

3. Pre-Launch Checklist

- [x] All 46 automated unit and integration tests passing (`flutter test`).
- [x] Static code analysis clean with 0 warnings (`flutter analyze`).
- [x] Medical coding (ICD-10-CM & CPT) verified.
- [x] Offline outbox synchronization tested.
- [x] AES-GCM AudioVault encryption at rest verified.
- [x] Multi-recording deduplication verified (1 card per patient encounter).
- [x] Release App Bundle generated (`notenra-v1.0.2-playstore.aab`).
