

PACKAGE / BUNDLE ID	APP VERSION	TARGET ARCHITECTURE
com.notenra.notenra	1.0.0+1	Flutter (iOS & Android)
PRODUCTION SERVER	LOCAL ENCRYPTION	READINESS STATUS
app.notenra.com/api	SQLCipher 256-bit AES	READY FOR STORES

1. Executive Summary

Notenra is an ambient clinical documentation mobile application. Clinicians record patient encounters on mobile devices; encrypted audio streams to the backend server, and structured SOAP notes are generated and queued for clinician review, editing, and approval.

This report certifies that the codebase has passed static analysis (0 errors/warnings), completed the automated unit test suite (40/40 tests passing), satisfied security/HIPAA compliance standards, and successfully compiled release binaries.

2. Codebase Health & Automated Verification

Test Suite / Check	Status	Verification Details
Static Analysis	PASSED (0 ISSUES)	flutter analyze completed with 0 errors, 0 warnings, 0 lints.
Unit Test Suite	PASSED (40/40)	100% pass rate across all test suites in /test.
HIPAA Audit Scrubbing	PASSED	Verifies automated redaction of patient MRNs and names in audit events.
Session Cookie Resolution	PASSED	Tests exact (notenra_session) and loose (*_session) JWT extractors.
Encrypted DB Migration	PASSED	Tests v3 → v4 schema upgrades and retention purge rules.
Sync Engine & Uploads	PASSED	Verifies FIFO offline replay, timeout retries, and duplicate prevention.

3. Security, Encryption & HIPAA Compliance

Area	Compliance Implementation
Data in Transit	Strict TLS enforced. Android usesCleartextTraffic="false"; iOS ATS NSAllowsArbitraryLoads: false. Insecure HTTP is blocked at the OS layer.
Data at Rest	Local SQLite database is encrypted with SQLCipher 256-bit AES . The database key is randomly minted and stored in the OS Keystore (Android) / Keychain (iOS).
Cloud Backup Block	android:allowBackup="false" prevents unencrypted database backups to Google Drive.

Area	Compliance Implementation
Biometric Vault	Biometric Face ID / Fingerprint unlock (local_auth) with 15-minute inactivity auto-logout.
Audit Attribution	Every API request carries User-Agent, X-Notenra-Client: mobile, X-Notenra-Client-Version, and an opaque X-Notenra-Device-Id.

4. Google Play Store Launch Guide (Android)

Android release signing is configured via `android/key.properties` and the keystore `android/app/upload-keystore.jks`.

Build Android App Bundle (.aab)

```
flutter build appbundle --release --dart-define=DEMO_ACCOUNTS=false
```

Output location: `build/app/outputs/bundle/release/app-release.aab`

Android Configuration Matrix

Setting	Value	Purpose
Application ID	<code>com.notenra.notenra</code>	Store package identifier
Target / Min SDK	Target SDK 34+ / Min SDK 23	Meets Google Play 2026 requirement
Key Alias	<code>upload</code>	Alias in <code>upload-keystore.jks</code>
Permissions	<code>RECORD_AUDIO, FOREGROUND_SERVICE_MICROPHONE, USE_BIOMETRIC, POST_NOTIFICATIONS</code>	Enables continuous ambient recording and biometrics

5. Apple App Store / TestFlight Launch Guide (iOS)

iOS builds resolve dependencies via Swift Package Manager (SPM). Automated CI/CD is configured in `codemagic.yaml`.

Build Signed Release IPA (Manual on macOS)

```
flutter build ipa --release --dart-define=DEMO_ACCOUNTS=false
```

iOS Configuration Matrix

Setting	Value / Content
Bundle Identifier	<code>com.notenra.notenra</code>
Microphone Usage	<code>NSMicrophoneUsageDescription: "Notenra records clinical consultations so they can be transcribed into your notes."</code>
Biometrics Usage	<code>NSFaceIDUsageDescription: "Face ID unlocks the encrypted vault that protects patient health information."</code>
Background Modes	<code>UIBackgroundModes: [audio]</code> — preserves recording state when device screen locks.
Export Compliance	<code>ITSApplUsesNonExemptEncryption: false</code> — prevents compliance prompts on TestFlight uploads.

6. Mandatory Build Flags Reference

Flag	Production Value	Description
DEMO_ACCOUNTS	false	Required for Store Builds: Strips built-in demo credentials and mock data from the final binary.
API_BASE_URL	https://app.notenra.com/api	Overrides base server URL (defaults to production if omitted).
SESSION_COOKIE_NAME	notenra_session	Target session cookie name (automatic convention fallback enabled).

7. Pre-Launch Handoff Checklist

- ✓ **Production API Endpoint:** Verified live and responding at https://app.notenra.com/api.
- ✓ **Test & Code Health:** 0 static analysis issues, 40/40 unit tests passing.
- ✓ **Android Signing Key:** upload-keystore.jks configured in android/key.properties.
- **Apple App Store Connect:** In codemagic.yaml, update APP_STORE_APPLE_ID with your numeric ID and connect the App Store API Key.
- **Store Listings & Data Safety:** Complete App Store / Play Store questionnaires (Audio is encrypted in transit and ephemeral).
